

RightCrowd Access Analytics

User access reviews made easy

RightCrowd Access Analytics is a light-weight software solution that automates and delivers best-practice user access reviews for every system in your business.

Gain visibility of inappropriate user access

Could your organization quickly identify who has access to your most critical data or systems?

The problem is, that access auditing is time consuming and is out-of-date by the time the data is compiled. In this environment, effective security risk management is almost impossible.

RightCrowd Access Analytics was developed specifically to address these problems. The application focuses on auditing and reporting on who has access to your systems and critical information. It ensures your user access reviews and compliance reporting is up-to-date and fast to produce.

The product can interact with any system in your business and monitors a wide range of security issues, such as:

- » Active accounts for terminated staff
- » Accounts that have non-expiring passwords
- » Account ownership
- » Access to file shares
- » Access to physical areas

Users can instantly assess the health of access management and quickly determine where remediation is required.

Identify vulnerabilities

Define your own controls to monitor. Cross correlate system access data to preemptively identify security risks.

Mitigate insider threat

Detect suspicious combinations of user access from any cloud, on-premise, in-house or legacy application.

Identify anomalies

Easily visualize identity anomalies, expired access permissions, duplicate cards, access for terminated staff and more.

Monitor privileged access

Review access and validate access rights to your systems, databases and critical information.

Be ready for an audit any day

Demonstrate user access compliance improvement across every standard or regulation (ISO 27001 etc).

Reduce audit time and cost

Proof of compliance is just a few clicks away. Reduce audit time by automating your user access reviews.

Reduce your audit preparation time by 95% and improve compliance outcomes.

Access changes happen every day, companies struggle to know 'who' has 'what' levels of access to their assets. Gain visibility and get in control with RightCrowd Access Analytics.

Map it

Start with visibility of access and asset data

Maps access data collected from any system.

Patented technology builds virtual relationships within your data, allowing you to review the access footprint of your identities, with relevant contextual information.

Time-machine like functionality allows you to review and compare access rights from the past.

Measure it

Automatically identify unauthorized access

Check access rights against security and safety policies to identify unauthorized access and outliers. Easily initiate corrective actions to be pushed out of the platform to your existing process or ticketing system.

Automated checks run every day, allowing you to implement a true discipline that keeps your access rights up-to-date.

Monitor it

Easier User Access Reviews

Create instantaneous and repeatable user access reviews, that contain meaningful context from multiple systems data in a single view.

Audit facilitators can track completion in real time and responders can collaborate as they make informed and efficient decisions.

No more chasing disparate spreadsheets!
